uniFLOW

Embedded Applet for Canon ScanFront Networked Scanner

Device-integrated Secure Scanning

uniFLOW Support for the Canon ImageFORMULA ScanFront 330

The Canon ImageFORMULA ScanFront Networked Scanner can now benefit from uniFLOW advanced scanning capabilities. Developing scan processes from merely imaging paper to true information capture, a uniFLOW-enabled ScanFront Network Scanner provides users with secure, role-specific scanning workflows and image processing options in addition to an already feature-rich network-based scanner.

With its ultra-compact design, the ScanFront has an ideal size for small locations like branch offices or retail service points where large multi-functional devices may be inappropriate.

Added Value for your Canon ImageFORMULA ScanFront Network Scanner

- Personalized workflows, following you from Canon imageRUNNER ADVANCE devices to ScanFront Networked Scanners, ensuring that users see only those scan processes needed for their job role

- Authenticate via proximity card reader, PIN code or a user name/password combination as well as anonymous logon

- Optical character recognition supporting over 130 languages and advanced image processing options including despeckle, deskew, blank page removal and black border removal

- Powerful scan workflows with optional field validation, rules or automatic data lookups as well as batch scanning, document separation and bar code recognition

- Save your files in various destinations as editable MS Word documents, MS Excel® spreadsheets, highly-compressed text-searchable PDF, TIFF or JPEG

- Manage your scan workflows centrally across your imageRUNNER ADVANCE and ScanFront fleet with full security and use tracking

- Scan directly into in-house or cloud destinations such as Microsoft OneDrive® for Business, Microsoft SharePoint® Online, Therefore™ Online and Dropbox

Fully personalized Scanning Workflows

Securely scan, process and distribute information directly where it needs to go, reducing or even eliminating additional manual processing and filing for the user. Workflows follow users between ScanFront Networked Scanners and Canon imageRUNNER ADVANCE multi-functional devices, offering the same user experience regardless of the device.
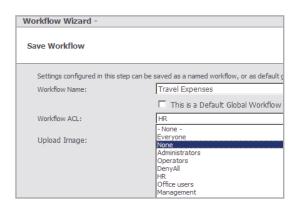

Process & Distribute

Features include data entry, barcode or OCR based data extraction, and the ability to validate data against external databases or built-in field rules. With additional features such as document fingerprinting, forms handling and document conversion, the information capture potential is endless. When done documents can be easily distributed to a variety of in-house or cloud destinations including Microsoft OneDrive® & OneDrive® for Business, Microsoft SharePoint® & SharePoint® Online, Therefore™ & Therefore™ Online, Dropbox, Google Drive™, Evernote®, Box and others.

Centralized Management

The process of deploying and managing scan workflows is as simple as running a wizard with which you provide destination details, processing and conversion settings, and user interactions. Your new workflow automatically appears on all Canon ScanFront Networked Scanners and imageRUNNER ADVANCE multi-functional devices, and using built-in uniFLOW Access Control Lists, can be displayed to specific user groups or the entire organization.

Benefits

Increase Office Productivity

■■ By making scanning as easy as possible, employees can retrieve documents much quicker, meaning time is not wasted searching for information.

Personalized Scan Workflows

■■ Users have immediate access to their specific scan workflows no matter whether they work at their desk or move within the organization using any Canon imageRUNNER ADVANCE or ScanFront Network Scanner.

Reduce Document Storage Costs

■■ Once documents have been scanned, they can be shredded and no longer need to be stored on-site. This saves costly office space.

Reduce Errors caused by manual Processing

■■ By automatically capturing metadata, errors caused by manual entry will be avoided and digital documents can be retrieved faster.

Raise Document Security

■■ To prevent unauthorized use, uniFLOW ensures that users identify at the device. Various authentication methods are possible.
